

THE FISH HATCHERY

Learn and see the life cycle of fish

The Ballarat Hatchery has a unique history in that it helped pioneer the introduction of Trout, Perch and other game fish into Australia.

You are a team of fish experts that have been asked to report on the different species of fish at the Hatchery. What are the types of fish at the Hatchery? Where do they go once they are full sized? What are the differences between the fish?

Imagine you are one of the volunteers at the Hatchery. You are looking into one of the ponds and see a bright beautiful shiny fish that is quite different from the others. Draw it here:
